
HEXAVALENT CHROME (BRIGHT / HARD) PLATING PROCESSES

KROMSOL 501	Conventional bright Chromium process with outstanding throwing and covering power.
KROMSOL 502	SRHS Chromium process with outstanding throwing and covering power. High tolerance for chromium, (III), works at low temperature and chromic acid concentration. Also suitable for Hard Chromium Applications.
KROMSOL 503	An Etch Free High Efficiency Hard Chrome plating process. Provides bright, microcracked, abrasion proof hard layers. Operates economically at lower chromic acid concentration.
