
HIGH SPEED PLATING PROCESSES

GALOX 410	Fine grain additive for sulphate base zinc electrolyte for tube, strip and sheet plating in continuous lines. Uniform deposition of highly ductile layers with excellent adhesion.
KUPFSOL 608	High speed acid copper plating process for continuous tube and strip plating lines.
GALOX 756	High performance chloride Zinc plating process for continuous wire, strip and sheet plating application. Produces, brilliant and ductile deposits.
NI SPEED 700	A high speed nickel plating process for plating of nickel on strips and wires. Deposits are extremely brilliant, ductile and white.
